ATTN: Ferda Simpson, Clerk

RE: Soils, Carbon Markets, and Greenhouse Gas Exemptions

April 18, 2023

Dear Clerk,

Biological Carbon Canada does the work, so Canadian farms and industry are ready and able to supply the sequestration outcomes and offsets Canadian companies seek.

The Committee currently has a soil health study and will soon address a Bill from the House addressing farm emission levy exemptions.

They are connected. Keeping soils healthy feeds Canadians. Soil sequestration builds agronomic capacity. Addressing climate changes and reducing farm emissions that make economic cents for Canadian farms. This requires carbon markets.

BCC seeks an invitation from the Committee. We will outline the connections between healthy soils, GHG reductions, and carbon markets for the Senators.
