When the VFPA met with the committee on October 3, there were some questions that required follow up.

- **What is the rate for the electricity used for shore power?**
  - The rate is 8.796 cents per kilowatt-hour, and is based on a non-firm, interruptible supply, for both cruise and container shore power.

- **How does the billing work for shore power?**
  - Cruise ship shore power – Vancouver Fraser Port Authority is the account holder with BC Hydro, but the bills go directly to the cruise lines and are paid directly (to BC Hydro) by the cruise lines
  - Container vessel shore power - Terminal operators are responsible for bill payments to BC Hydro, and will distribute charges to vessel operators

We trust this is the information the committee was seeking, however, please let us know if they would like more detail or if there are any other questions.

Kind regards,
Carrie
